

PANDA FINANCE (PAND)
ONE PEOPLE – ONE TOKEN

APRIL 2021

[HTTPS://PAND.FINANCE](https://pand.finance)

VER, 1.00.1

ABSTRACT

PAND is a way to build a peaceful community around the world. The main goal of PAND is to connect all people around the world without any limitation and no matter where their lives. PAND is a token whose value rests on internet subculture (Ex. DOGE) but with better construction. DOGE is a wonderful coin but it has some problems such as inflationary which means there is no end for total supply for it and each time dogecoins circulation increases, dogecoins actual value may diminish. PAND solve this issue, the number of PAND is fixing so there will never be more PAND in circulation.

Panda Finance (PAND) is a deflationary token based on ETH's main net (ERC 20). Whenever a transaction is approved with PAND, 5% of the transaction is distributed and removed from the total supply.

What are deflationary tokens mean and how we can use them to our advantage?

As Above mention, for each transaction with PAND, 5% of the transaction is distributed and removed from the total supply which means each transaction will bring more tokens to people who hold PAND, and at the same time, the total PAND token will be decreased. In simple words, every time PAND is used, the value of the remaining PAND tokens in circulation is increased by simultaneously decreasing the supply (deflation), while also distributing HOGE to everyone using the token. As a result of this process, all PAND holders will gain more tokens.

PROBLEM

The deflationary token or coin is not a new idea and there were (are) some meme coin/token which claimed they had the same idea, but there were only pump and dump schemes. Unfortunately, as a result of that, that might affect people's mindset about PAND tokens. However, we fixed these issues with some precautionary actions which lead us to make a safer place for our community.

SOLUTION

1- Community owned token:

From 100% of total supply PAND, 50% burned (send to dead address) and other half deposited in Defi platform which means there is no hidden address or team address.

2- All Tokens deposited in Defi were locked and there is no way to unlock them. It's a necessary action to bring more trust in the community and token value.

With all said, there will be some pump and dump due to the nature of the token which is not stable but the holder can be sure that those movements are natural. As we all know, each natural pump and dump will make us stronger and increase our token value.

NETWORK

At the moment, PAND only runs on the Ethereum blockchain (ERC20) and no other network (TRC2, BSC ...). Always make sure to check our contact info in your wallet and transaction. DO NOT TRUST ANYONE THAT CLAIMS PAND TOKEN ON OTHER NETWORKS.

Contract Address: 0x5bc52b5367b637bec5f818e69208eb9f03c426ee

TOTAL SUPPLY:

There is 8,000,000,000,000 PAND, that's it! 50% of token burned and only 50% left which means only 4,000,000,000,000 are usable (at the beginning). Over time and after each transaction (buy/sell/transfer), total supply will decrease automatically, which demand up.

EXAMPLES:

For better understanding the whole PAND smart contract, we provide an example below.

Distributed and Burned process:

THE PAND ERC-20 token has a 5% fee for each transaction. We can calculate the payout and burn from the following formulas. The total minted tokens of PAND is 8,000,000,000,000 (8 trillion) with 4,000,000,000,000 (4 trillion) burned on the initial mint (mentioned above)

$$\text{Distributed Amount} = \text{Transaction Amount} * \%5$$

$$\text{Distributed Per Address} = \text{Distributed Amount} * (\text{Address Owned PAND} / \text{Total PAND})$$

$$\text{Burned Amount} = \text{Distributed Amount} * (\text{Burn Address PAND} / \text{Total PAND})$$

Ok, let do a sample to understand the whole process here. We named a PAND holder 0x0oldPandler which owned an address with 5,000,000,000 PAND token and new buyer named it 0x0newPandler which has PAND, want to buy 1,000,000,000 PAND at Defi platform with 5% slippage:

$$\text{Distributed Amount} = 1,000,000,000 * 0.05 = 50,000,000$$

$$\text{0x0oldPandler Distributed (Earn)} = 50,000,000 * (5,000,000,000 / 8,000,000,000,000) = 31,250 \text{ PAND}$$

0x0oldPandler address will be credit instantly and automatically 31,250 PAND and the total token on the address will be:

$$0x0oldPandler = 5,000,000,000 + 31,250 = 5,000,031,250 \text{ PAND}$$

Now calculate the total Distributed for this transaction and burned token, let's named burned token 0x0Pandburned with 4,150,000,000,000 PAND:

$$0x0Pandburned \text{ Distributed (burned)} = 50,000,000 * (4,150,000,000,000 / 8,000,000,000,000) = 25,937,500 \text{ PAND}$$

$$0x0Pandburned = 4,150,000,000,000 + 25,937,500 = 4,150,025,937,500 \text{ PAND}$$

Total Distributed for this transaction:

$$50,000,000 - 25,937,500 = 24,062,500 \text{ PAND}$$

0x0newPandler distributed 24,062,500 PAND to active wallets and burned 25,937,500 PAND on the swap from ETH to PAND, with a total cost of 1,050,000,000 PAND plus Defi liquidity pool fees and Ethereum gas fees.

All of the above processes will execute instantly and automatically after each transaction. As you can see by just holding the PAND you can make a profit in the long term. Besides that, as we are a community token, we will bring many plans to PAND so we can grow it much better.
