

# IDEAS

IDEAS is a token that will make your ideas and projects become true.

# IDEAS

So many times we have that brilliant idea that only need some money and effort to become true..  
You have an idea or a project, you can share it on our platform, and investors or donators will help you reach your goal.

## Our Vision

IDEAS's mission is to change the way people funds their works to a more decentralized, open, and borderless way.

We aim to give each person with a good idea or project an opportunity to share his idea on our platform, and other users that read his idea can become investors or donators, by sending him crypto assets to achieve his goal.

# Our Vision

## Share you idea

On our platform you can put your project and split it to stages, each stage needs a time and budget.

## Invest / Donate

Users can see your project, and can invest in it to make profits later, or they can simply donate to a certain project.

## Win/Win Situation

In the end you will create your project, and investors will make profits.

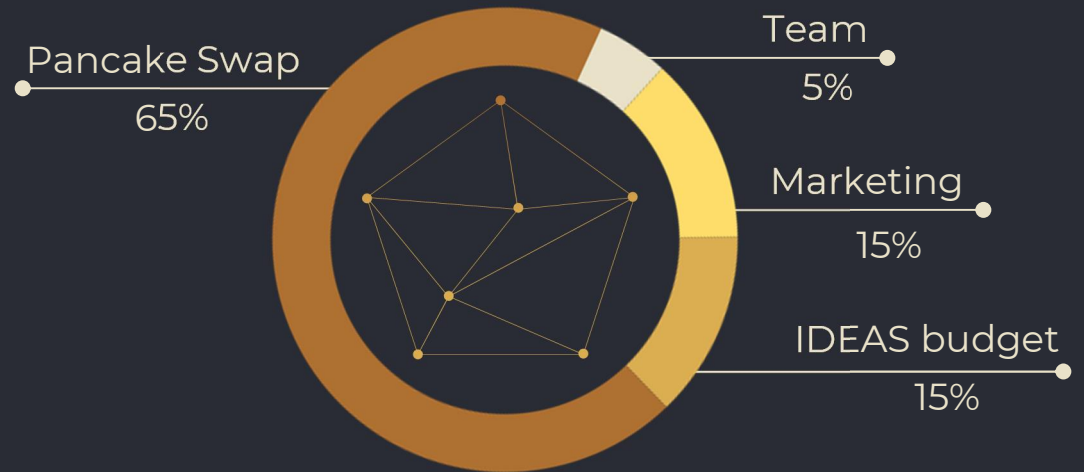

# Tokenomics

## 250 Million token

Team tokens will never be sold.  
Marketing tokens will be used for the marketing of the project.

Budget tokens will be used for creating the phone application, the platform, and other feature of the project.

10% of the tokens was sold in presale to 10 different addresses 1% each, to provide the initial liquidity.

## How It Works

### How will someone share his idea or project ?

In our platform, you will create an account and have the ability to upload your idea in text, images and videos if needed.

The more evidence you provide the more investors and donators might be interested in your project.

It is necessary to divide your projects to at least 4 or more stage of works, each stage need a certain time to be completed and a certain budget.

The other users will read and see your project and the stages, and they can invest in the whole project or in a certain stage only.

Or simply the users can donate to your project without taking profits later.

## How It Works

What projects will be accepted in the platform ?

The platform will be divided by tabs, so for example a "Game Development" project will be in the "Web development" tab, and for example a "Trees Planting" project would be in the "Environmental projects" tab, so basically, users can have whatever projects they want, it's about the investors if they want to take the risk and invest in a project or not.

## How It Works

Users can invest in projects ? Not only donate ?

Yes, just like any normal work, investors have the rights to take some profits later when the project is finished, However, the amount and type of profits are to be specified by the project owner.

The investors have all the right to invest or ignore any project, and the option for tips will be available for donation to the project that you love to be done.

## How It Works

When will the website and phone application be ready ?

We have already started the work on the website, and a user friendly phone application will be created after the website.

All to make it easy to share your idea and projects, or to invest in good projects.

Be sure to check our Roadmap below.

## How It Works

How are this platform different from the other crowdfunding platforms ?

We have a great vision where the people can fund their works and projects simply and without so much complication, and most importantly in a decentralized, borderless way.

We are aiming to give users the opportunity to fund their projects with a very user friendly phone application and website.

Also stay tuned for additional features to be added later

# Team

- Our team is consisted of experienced developers and software engineers.
- You can contact us anytime on our Telegram here :  
[https://t.me/IDEAS\\_TheToken](https://t.me/IDEAS_TheToken)
- For now we will keep our identity hidden since it's less pressuring and more comfortable, the team will reveal identity later on.
- All the code is open source and verified.. Statements and goals can be checked in the code for verifications.

# Roadmap

## STAGE 1

- Publish Website and Media
- Deploy Token on Pancake Swap
- Provide Safe Liquidity

## STAGE 2

- Marketing and Advertising
- CoinMarketCap Listing
- Coingecko Listing

## STAGE 3

- Publish the Platform Website
- Publish the Phone Application
- Build Partnerships With Big Projects

## STAGE 4

- Listing on Bigger Exchanges
- NFT and More to Come Later..

One of the vices of the virtue of decentralization  
is that people don't share ideas.

And we are here to solve this problem.
