Utility

The education portal (Lollipop) will provide a means for schools K-12 to create and deploy educational programs on blockchain technology and its applications. The platform allows students to earn tokens and certificates through completing the crypto courses being offered using protocols that map onto the blockchain-based utility applications. Students are rewarded in crypto as they learn, build and apply real world skills in the context of blockchain technology.

The benefits of this education portal (Lollipop) include providing schools with an easy way to effectively introduce crypto-based courses into their curriculum and reducing the complexity for students transitioning from traditional academic contexts to those of distributed ledger-based applications. The training reinforces technical information related to different mining algorithms, distributed ledger wallets, tokenization methods, market analysis, coding smart contracts and more . Additionally, it allows for Lollipop crypto completed certifications requested by employers or institutions interested in validating employees'/students' knowledge on this field. This can also open new opportunities for different business models & partnerships with educational platforms within the same ecosystem.

Vision

Cryptocurrency and finance are two topics that are becoming increasingly important in today's digital world. Teaching students about these concepts can help equip them with the knowledge to make informed financial decisions, both now and in the future. By helping them understand how cryptocurrency works, as well as its potential risks and rewards, students can become more informed consumers and investors as they enter adulthood.

Additionally, familiarizing students with traditional banking systems and budgeting techniques can promote healthier financial habits at an early age, which may lead to increased economic stability later on. Finally, teaching students about cryptocurrency and finance will also offer them extra insight into various markets and the global economy, providing a useful foundation for those looking to build a career in business or finance.

Facilitating Partnerships

We value combined action and cooperation. We partner with powerful educational establishments across the world, including charities and causes, to support the widespread adoption of crypto as a whole.

With active collaboration and openness, we can drive collective success, accelerate adoption and unlock education for crypto space as a whole.

Roadmap

Phase 1
Develop Website
Build Community
Launch Website
Listing Sites
Socials
Dex Tools Info Updated

Phase 2
Continue Building Community
Shila Multi-Chain Swap
Staking
Shila NFTs

Phase 3
Coin Market Cap
Coin Gecko
CEX Listing
Continuous Marketing
K-12 Crypto Education dApp
