A dramatic space scene featuring a bright sun, a ringed planet, an asteroid belt, and Earth.

Welcome to MetaX

A realistic meta universe,
a sci-fi epic and an intergalactic legend...

Inspiration

This is your territory, you were born to be the king of the world ...

The galaxy seemed to be an oval halo, reflected in the depths of the ice-blue pupils of his eyes. His steely face looked even more stark and deep in the light's reflection. He shook his head for a long time and said, "I don't think so ...The universe is indeed vast and magnificent, and mankind is but a drop in its ocean, but for mankind itself, race, war and peace, the life and death and love and hate of individual individuals, are things to be explored and pursued with a lifetime of dedication. The meaning is not much less than that of this magnificent universe

"..... Humans live like mayflies in this vast space, but the life we have, like the rise and fall of the entire universe, is nothing more than a process from life to death. From this point of view, what is the effort made by humans today to survive compared to the continuity of the entire universe?" As if it were a great joke of time and space, and as if fate were playing a malicious trick.

MetaX is inspired by the magnificent interstellar colonisation movement described in "Galaxy Empire", where mankind has landed on the desolate planets and swept the galaxy into a long era of interstellar warfare until the entire galaxy was united.

A vast empire rises to rule over 25 million populated planets, spanning 100,000 light years and counting trillions of people - the Galactic Empire.

The Dark Ages are upon us, with assassinations and conspiracy theories. Several forces check each other and the Empire is corrupt and destined to fall apart.

Where there are riots, there is resistance. How to break the long dark night and welcome the light of freedom? Until one day somewhere deep in the galaxy, a sound rings out across the galaxy and MetaX appears, a group of peace-loving and freedom-loving aspirants. To survive, they built a new base in the galaxy. They complete one foreign expansion after another through diplomacy and military.

**Let our MetaX players start a new
chapter of the Empire of the Galaxy!**

MetaX game background

Game coins and equipment in traditional games depreciate quickly and are illiquid. However, the game rewards in blockchain games are cryptocurrencies (fully decentralised, secure and anonymous, low transaction costs, and efficient). Blockchain games are based on a decentralised consensus mechanism and a shared value system, which can enhance the liquidity of game assets and establish a good ecosystem.

The MetaX team has extensive experience in game development and operation. They have analysed the problems of traditional game platforms and existing blockchain games. Below are some common issues:

1. Semi-decentralised management and storage of assets are easily to be manipulated, with high fees, slow transactions and opaque funding. Under the guise of the Metaverse, it is actually a pure mining game with low security and vulnerable to attack.
2. Lack of real ownership and scarcity, which reduces the motivation of players to invest time and effort in the game. This does not provide a real and effective and low-cost promotion of a win-win ecological community, which restricts the operational efficiency of the entire game ecosystem.

3. Traditional game data is not open to public, not transparent and not fair, which seriously affects game playability and fairness, and lacks sufficient incentive. The lack of transparency will continue to affect the operation of the game and can lead to fraud.

4. The problem of game asset liquidity. Most of the blockchain games lack a long-term healthy economic model and market circulation becomes a problem. Users are unable to obtain real-world rewards through participation and contribution.

5. Most blockchain games have very poor graphics or the gameplay is far from PC gaming . This seriously affects GameFi narrative.

6. The gameplay is monotonous, in-game buying and selling land, sandbox play, building itemerties and buildings...

Future trends in blockchain gaming

The role in blockchain game is NFT token. The major characteristics of the blockchain, immutability and decentralisation, can just give players and the market the opportunity to play a truly fair game. This prevents players from having their game accounts stolen and protects their assets. At the same time, blockchain game has a DAO organisation. The right to how the game develops is handed over to the players to vote and manage by themselves. This eliminates the traditional game manufacturers to tamper with the rules of the game in order to protect their own assets and bans the traditional game token issuer to issue token without limitation or restriction.

Important carrier

DeFi drives the development of DAO

DAO (Decentralised Autonomous Organisation), is a community that interacts around hardcoded rules encoded in the blockchain. Its greatest strength is its global, permissionless nature. The core rules and governance of DAO are handled by smart contracts, which align the interests of participants and jointly achieve organisational goals.

DAO has several characteristics: information transparency, token incentives, open source, community autonomy, ownership by the community, and freedom. Compared with traditional organisational forms, DAO are more secure and stable because no one can control the entire organisation. Because the DAO runs on permissionless decentralised blockchain technology, it is able to remain autonomous without external interference.

DAO seek to decentralise governance and move from team-led to community-led because of the builder's protocol. While still having built-in incentives to reward core contributors and users of the protocol. The team achieves decentralised decision execution through measures such as token incentives to participate, promote the development of protocols, achieve project innovation and fair competition. The team leaves the voting, social networking, and community autonomy rights to the community.

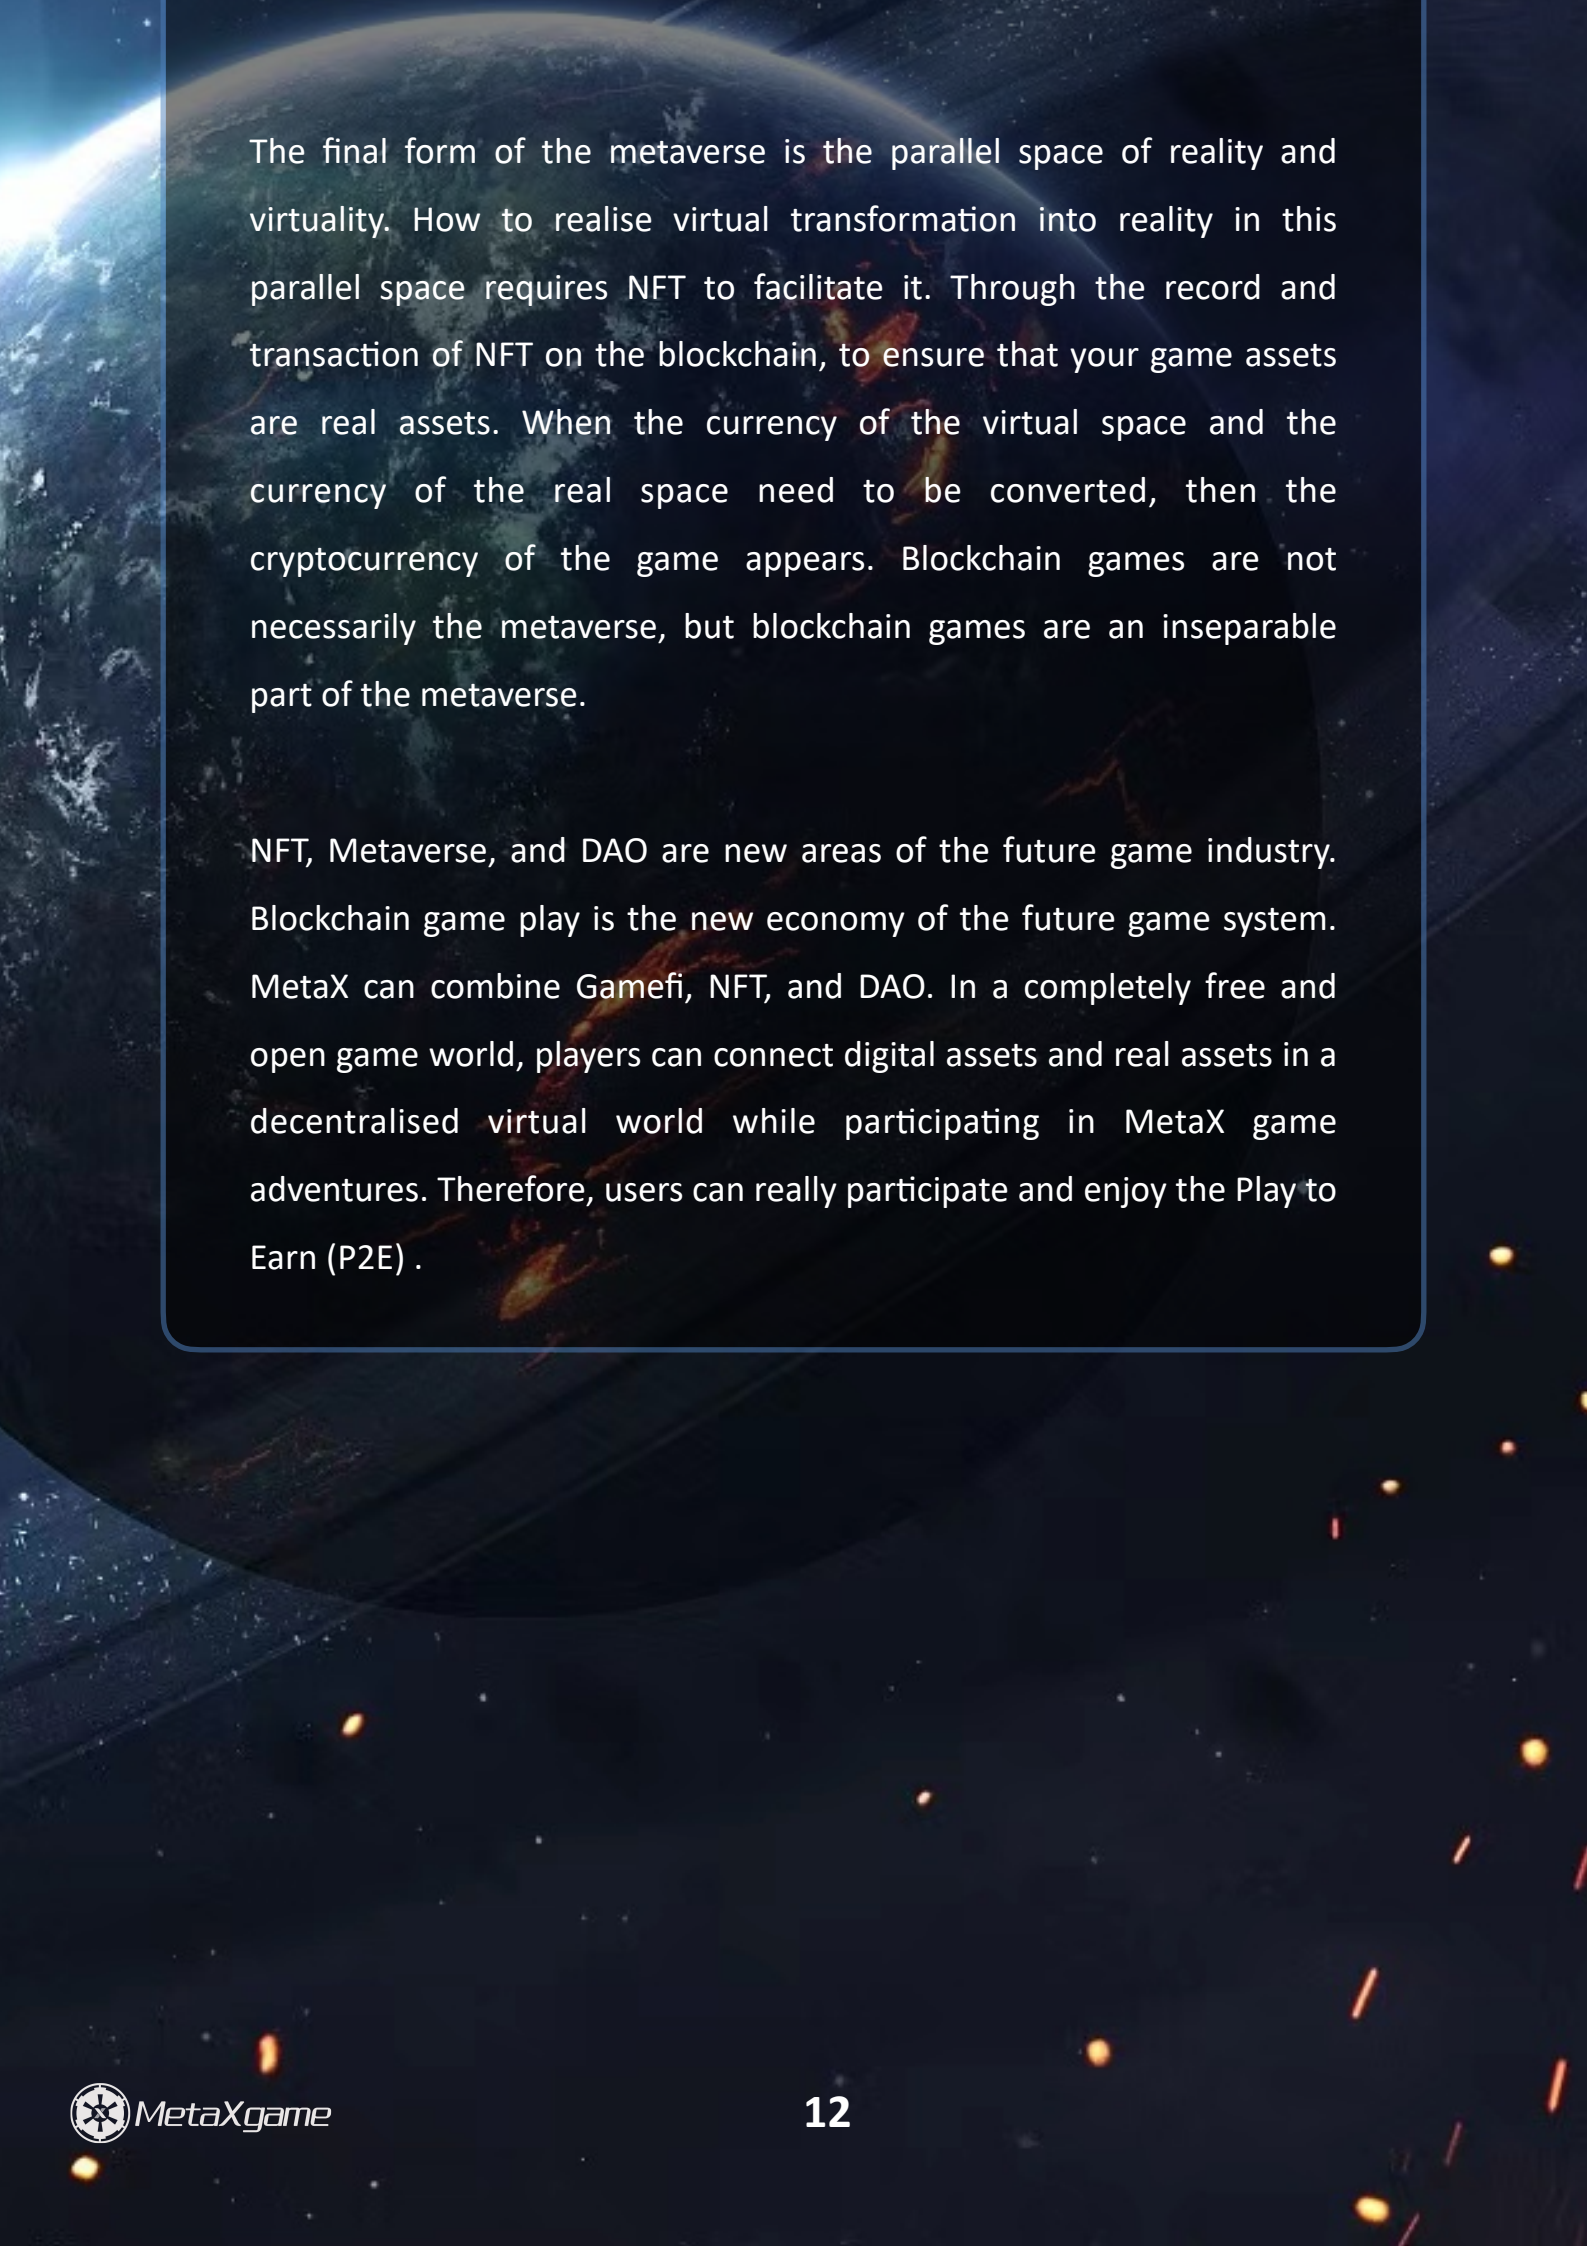

DAO accelerates metaverse development

DAO is an organisation that fits into the Metaverse. DAO guarantees the orderly formulation and implementation of rules, both of which are the cornerstones of the metaverse system. The combination of DAO and the Metaverse became inevitable. DAO is the most important organisational form in the blockchain world. Any Internet user can easily join a DAO for global communication and collaboration. At the same time, users can also participate in the governance of the organisation by holding tokens.

With the rapid development of GameFi's metaverse, DAO enhances consensus for MetaX, incentivises players to contribute liquidity to the project, and increases participation. At the same time players contribute to the DAO in that players create value through their participation and add value to the DAO.

NFT lays the foundation for the development of the game industry

After years of development, NFT has formed application scenarios such as game equipment, digital art, event tickets, domain names, collectibles, encrypted artwork and even physical assets. A common feature of these scenarios is that valuable things are irreplaceable. The rise of NFT is actually a sign of the application and adoption of blockchain technology. This marks that blockchain technology is no longer a means of profit-making out of life, but a technological force that improves life experience.

The background of the page is a deep space scene. On the left, the curved horizon of the Earth is visible, showing blue oceans and white clouds. The rest of the background is a dark, starry space filled with a vibrant nebula of orange, red, and yellow light, and scattered white stars.

The final form of the metaverse is the parallel space of reality and virtuality. How to realise virtual transformation into reality in this parallel space requires NFT to facilitate it. Through the record and transaction of NFT on the blockchain, to ensure that your game assets are real assets. When the currency of the virtual space and the currency of the real space need to be converted, then the cryptocurrency of the game appears. Blockchain games are not necessarily the metaverse, but blockchain games are an inseparable part of the metaverse.

NFT, Metaverse, and DAO are new areas of the future game industry. Blockchain game play is the new economy of the future game system. MetaX can combine Gamefi, NFT, and DAO. In a completely free and open game world, players can connect digital assets and real assets in a decentralised virtual world while participating in MetaX game adventures. Therefore, users can really participate and enjoy the Play to Earn (P2E) .

MetaX project overview

MetaX is based on the grand universe and highly integrates elements such as Metaverse, Gamefi, DAO, NFT, etc., to present to players a freely developed universe. Each player can explore various unexplored planets through the wormhole engine across the galaxies. Players can colonise planetary territories, engage in interstellar wars, and own NFT equipment . This will be the Meta utopia for players!

MetaX game ecosystem

When the sound of the engine is heard again in this infinite deep space, this is you hear the past and the future;

When looking up at this never-before-seen starry sky, countless players are exploring and colonising new galaxies;

Unlimited game possibilities, an epic battle;

Come and change the battle pattern of the MetaX world together and travel freely in this virtual game world.

MetaX connects gaming with blockchain technology. Players can not only gain income through the game, but also have more motivation and confidence to hold the game token, forming a virtuous income cycle.

MetaX's concept of "freedom and openness" always runs through the entire game ecosystem. The game has a variety of gameplays to meet the needs of various players, allowing users to experience the game while improving the player's sense of participation and achievement. For example, players can obtain token through games such as "energy system, battle system, item system, lord system, and guild system". In the 'free and open' mode, players can establish an orderly game ecosystem.

The background of the page is a dark space scene. It features a large, curved horizon of a planet, likely Earth, with a blue and white atmosphere. In the foreground, there are several dark, irregularly shaped asteroids or space rocks. The overall lighting is dim, with the primary light source being the planet's atmosphere and the stars in the distance.

If players want to be more powerful, they must own more X1 token. If you want to win the game, you must have excellent equipment to expand your territory for more profits. In the later stage, as more and more players enter the MetaX ecosystem, more X1 token is needed to participate in Interstellar games. Relying on this unique economic system, users' demand for X1 token increases and its corresponding value continues to grow. This is the economic model of X1 token.

The asset X1 token in the game is an incentive for players as a battle or adventure mode. X1 token can be used to purchase items and equipment, and it can also allow players to participate in the governance of game development plans.

From the perspective of value, MetaX is completely decentralised, and the game is completely open and transparent. Its nodes are scattered all over the world and are rewarded to users in the form of games. It enables all those who participate in the growth contribution to benefit and create more possibilities.

From a technical perspective, MetaX encourages users to participate in the future development of the game, overall strategy, rule formulation, and community governance through an incentive mechanism. This can ensure the security, fairness and impartiality of the rights and interests of players.

With the maturity of the blockchain, the current blockchain game has entered a golden age. MetaX has finally started its journey...

High freedom gameplay

MetaX energy system

Characters entering the game are born on a planet (such as the earth). But in order to get more energy (rewards), it is necessary to go to other galaxies. Each teleportation consumes gas fees, and the farther the planet gets, the higher the energy. For example, the gravity engine in the items can perfectly break through this limitation.

MetaX combat system

I'm thinking...a planet is only insignificant in the galaxy. The galaxy is so majestic, but in the entire universe, it is just a tiny and fine dust... The battle you and I are preparing for today seems to be about the survival of life in the galaxy. But for the vast universe that has been living for hundreds of millions of years, no matter what the outcome of this battle is, it is just an episode in a corner.

In the battle system scene, players can build equipment to participate in the battle, or resist foreign aggression, or they can attack each other to grab each other's rewards. If you are not strong enough, you may be defeated by the behemoth players on the battlefield. When the aggressor's attack power is greater than the defence power of other players, it may be attacked (note that only players on the same planet can be attacked). Among them, the defeated player will automatically return to the birth planet after being attacked. The player's income starts from 0 and accumulates gradually, rather than appearing directly. Although the battle is brutal, in this virtual game world, each player has his own mission and lofty beliefs.

- In this MetaX universe, I am the king, fearless.

MetaX equipment system

The search for the history of human civilisation can never bypass the history of war, and the same is true for games. In MetaX, every shocking interstellar war, every sound of the wormhole engine, and the call of satellite radio, all seem to sound the rallying call for the battle. Players can achieve some of their own functions by purchasing items (Weapons, Imperial Sacred Arms, Defence g gears, Time cooling items, Sceptre of the Councillor, Wormhole Engine, Satellite Radio, etc). These are essential materials for the development of the player's territory. For example, after buying a Satellite Radio, you can broadcast to the entire system. Only by buying the Gravity Engine, can you break through the teleportation limit. Let players play games immersively, this is the connotation of the metaverse.

MetaX lord system

Each lord has its own planets under its jurisdiction, and the division of these ranges is determined by the lord's own strength. The stronger of the lord, the greater the scope of his rule. The lord can buy territory by spending the corresponding equivalent token, and put his own flag or exclusive logo on his territory. You can also write your own slogan for your territory. It is worth noting that this token is auctioned, and each bid must be higher than the previous one.

MetaX guild system

For a time, the galaxy shook, and the empire was shaken. The forces are immediately at war, and the greatest time of the human galactic age begins...

For newbies, from the moment you become a MetaX player, you are not alone in your battle. The first thing you should do when you enter the game is to find a guild to join, where you will have a sense of belonging

The world of MetaX is a game full of possibilities, passion and achievement.

Players can form alliances with each other to form guilds. Guild alliances can be formed within their own territories and can be used for large-scale alliance battles. The two warring sides or allied forces use their strength to take part in the battle between alliances. Throughout the battle, the two sides commit their forces to fight each other to the bitter end.

Each time the battle is fought, it is broadcast live via the guild discord channel. This is what makes MetaX such an innovative game, where players have more options and freedom to play in a world and they don't feel tied down. In the MetaX world, you have to put in more effort and time to become strong, no matter who you are, and this is what MetaX promises to its players - absolute fairness in the game.

MetaX ecosystem application

The MetaX platform is completely decentralised and can be opened and used by players anytime and anywhere, greatly increasing the frequency of use and enhancing the loyalty of the game itself. For example, players can obtain corresponding token value through MetaX trading, purchasing weapons, imperial sacred weapons, defence gear, time cooling items, councilor scepters, wormhole engines, satellite radio, upgrading skills and other actions. This incentive is sustainable in the long term, enhancing the entire game experience through various core drivers of the game ecosystem.

Circulation of value

Through MetaX, users can exchange, freely trade, convert token and equipment (Weapons, Imperial Sacred Arms, Defence gears, Time cooling items, Sceptre of the Councillor, Wormhole Engine, Satellite Radio, etc) around game-related applications to create a full circulation and liquidity of value.

Game applications

Players can use X1 token to participate in interstellar adventures, and the strong supply and demand relationship can make every X1 token in everyone's hands be used reasonably. The free and open gameplay, incentive mechanism and professional technical support perfectly support the value of X1 token.

Technology application

MetaX professional technical team provides an open game ecosystem for players, relying on the Ethereum chain to realise a scalable and highly compatible decentralised game system. Players are free to play their own imagination according to the overall framework of the game and enjoy a truly decentralised blockchain game.

MetaX economic models

X1, the MetaX ecosystem digital token, is based on Ethereum smart contracts and is the only token in the MetaX ecosystem, X1 token can be used for purchasing weapons, imperial saints, councilor scepters, wormhole engines, satellite radio. X1 token can be used for other functional settlements, transactions and smart contract executions. X1 token has a fixed total supply and an effective reward mechanism to keep the game's economy system stable. On the other hand, it drives the enthusiasm and cohesion of the entire game community members. Users can use the token incentive mechanism on the MetaX platform to enhance players' stickiness to use the game platform, so that players can experience the superiority brought by their own strength while playing the game. Other players showcase their achievements and growing assets.

MetaX value attributes

Because of the transparent, fair and immutable nature of crypto tokens, a real and trustworthy bridge is built between players and the platform. MetaX, a fully decentralised blockchain game, is based on the nature of the game's economic model, which allows players to circulate assets on any exchange worldwide that supports it. As the popularity of MetaX game increases and the demand for NFT gear becomes greater, players' MetaX holdings will also rapidly appreciate in value. Players are more motivated to participate in the game, and all of this drives the MetaX game ecosystem to grow at a high rate.

The MetaX and X1 value stems from two main areas.

1. Governance: Every player in the MetaX ecosystem is a member of the DAO. Every participant in the game has a role to play in the governance of the MetaX ecosystem and in deciding the future of MetaX. Because of its free and open gameplay, players can use their imagination in any way they like, which is one of the highlights of the MetaX game ecosystem.

2. Economic model: Through the free and open game systems (lord system, item system, battle system, NFT item system...) players participate in more ecological value applications of MetaX. For example, the MetaX battle system: players can attack each other to seize each other's territorial rewards. An attack can be launched as long as the attack power is greater than the defence power. However, only players on the same planet can be attacked. Players will automatically return to their birth planet after being attacked. This is the combat system. As the conflict becomes more intense, the determination to defeat the opponent becomes stronger. This drives players to have more tokens to buy NFT equipment and thus consume more X1 token, which is the most basic expression of the value of X1 token.

There are many drawbacks to the blockchain games currently on the market. These include: crude and simple graphics, old-fashioned game mechanics, lackluster playability, a single method of play, high prices, high barriers to play, the need for large amounts of money, lack of playability, and users whose goal is to gain money. MetaX uses the core technology of the blockchain for the entire game, using its technical strength and the advantage of a completely decentralised game. MetaX has invested a lot of resources and efforts in the development of the game. MetaX has excellent graphics, high freedom and diverse gameplay. This is a great advantage in the blockchain gaming market.

The main mission of MetaX is to realise a truly decentralised virtual world of the future through blockchain technology. It creates the ultimate utopia for gamers through a great economic model, open and free gameplay, and strong incentives.

The development of blockchain games is very fast now, and the logic of its financial attributes has had a beneficial effect on the early participants. With a good economic model, the game can be played for a long time. What players get here is not only entertaining, but also incentives and rewards.

Relying on these, MetaX and the players are deeply bound together.

MetaX application value

The significance and value of X1

Blockchain development cannot be achieved without the incentive of token. This requires an effective and incentive mechanism to be developed at the start of the project. Therefore, we can fully exploit the value and significance of tokens for incentives.

Payment method

X1 is acquired through user participation in equipment and game item trading, territory expansion, over-the-counter trading and decentralised exchange trading, etc. This allows X1 to circulate and add value to assets on the game platform.

Proof of stake

X1 token is a digital proof of stake. Holding X1 token can enjoy the rights and interests on the MetaX game platform (for example; Weapons, Imperial Sacred Arms, Defence gears, Time cooling items, Sceptre of the Councillor, Wormhole Engine, Satellite Radio, etc.). With the development of the MetaX game platform, the rewards of users has increased, and the value of the X1 token has also been greatly appreciated.

While the X1 token serves MetaX game, players can freely and innovatively develop and operate on the platform. Players can also receive a territory system with special effects to achieve a win-win situation of interstellar ecological value.

X1 token overview

Total supply of tokens

X1: 1,000,000,000

Introduction to X1 Token

The digital currency X1 is a native crypto digital token issued by the metaverse interstellar game MetaX. It is generated based on the Ethereum blockchain, has no central account, and the code are transparent and open source. It is the only circulating digital token in the MetaX ecosystem. The total supply of X1 is 1,000,000,000.

Out of the total supply

I. 500,000,000 X1 will be used for gaming platform

- 200,000,000 X1 for Galaxy Empire;
- 200,000,000 X1 for Galaxy Craft;
- 100,000,000 X1 for game maintenance and future development.

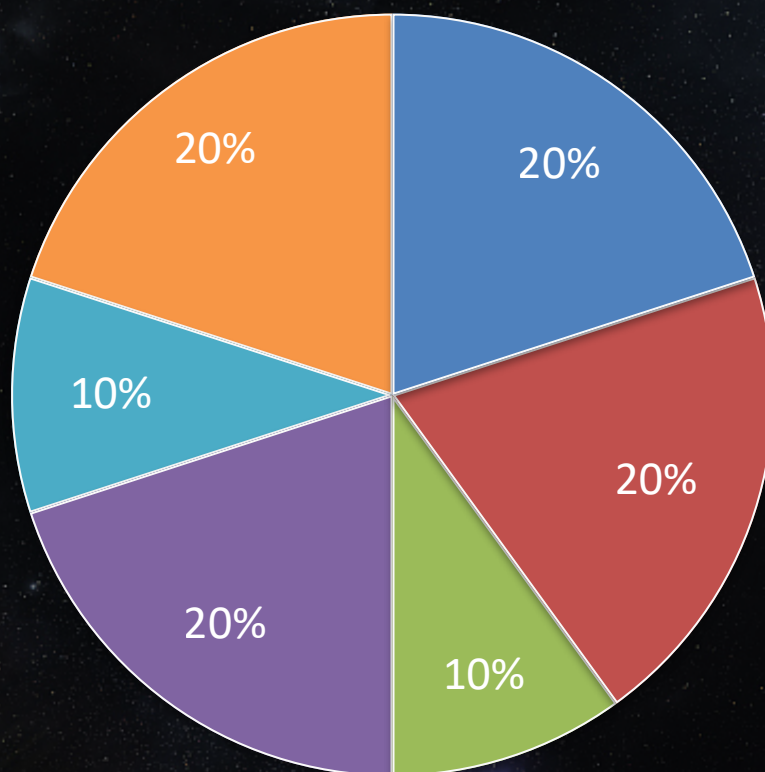

II . 200,000,000 X1 will be used for liquidity on Dex such as Uniswap.

III . 100,000,000 X1 will be allocated to DAO.

IV. 200,000,000 X1 will be security reserve. Security reserve is mainly used to compensate users in case any type of attacks or other security problems.

X1 distribution details

- Galaxy Empire Game
- Galaxy Craft Game
- Game Maintenance & Development
- Liquidity
- DAO
- Security Reserve

Road map

We look forward to having you with us at MetaX, where we aim for a undless universe...
