

WHITEPAPER

α AI

ABOUT US

What does our ai offer? It's simple, well not really. The ai scans the blockchain for deployed contracts then has certain parameters indicating if it is an alpha launch or not.

Here are a few primary parameters used; Time launched - Our ai has backtested what time the best performing coins are deployed/listed and how long before the token is launched after being deployed to give a clear profile.

Deployer balance - Deployer balance is also a good indicator alphAI uses, proven by historical data.
Contract type - Whether the contract is unique, big or never used before.

Wallet age/connections - alphAI can quickly scan through the blockchain to identify connections too.
Mempool sniper lock ons - Almost all alphas tend to have sniper bots locked on to buy as soon as liquidity is added, this is a clear give away and alphAI spots it easy.

TOKENOMICS

Name: alphAI

Ticker: \$aAI

ROADMAP

Q1

alphAI ICO
Beta AI release
Website release
VC gathering

Q2

Full AI release
Marketing push
Influencer collaborations

Q3

Regular improvements
AI diversification
CEX Listings
Further collaborations

Q4

Ecosystem reveal
Further utility proposals
10,000 Holders
