**The cost of bad data is an
astonishing 15% to 25% of
revenue for most
companies**

”

MIT Sloan
Management Review
November 2017

OUR VISION

Our vision is simple. Businesses waste money; we help reduce waste and improve profitability. In more detail, we enable seamless spend management, in real time, through secure blockchain technology and machine learning throughout the lifecycle of services exchange. Machine learning enables our clients to make incrementally intelligent invoicing decisions through a growing reference SQL database of approved and denied transactions. We succeed as our clients succeed through the use of our end-to-end internal spend management and services marketplace software.

ABOUT AXPIRE

aXpire is an ERP SaaS company offering a suite of products to increase efficiency of service spend and general profit margins. We are a real company, with real revenues. Our business is a spinoff from LSG, LLC, an insurtech SaaS company that has a history of working with Fortune 500 and “household name” clients, such as Nike, Coca Cola and the NFL. We were founded in January 2017, and are headquartered in Manhattan, New York, with employees in London, India, and Australia. Our object-oriented core technology was developed at the request of our first client - one of the largest hedge funds in the world (\$24Bn+ AUM) ^[1] - to enable the real-time visualization and management of payment processing workflows across legal, fund accounting, administration, finance and compliance departments. Given the proactive demand of clients, our core team focuses the majority of its time on developing aXpire’s core applications, and sharing the Company’s capabilities with prospective customers through live and web-enabled demonstrations.

Our core team consists of the prior LSG C-suite, with over 90 years of combined experience in the software-enabled payments space. We also have nine full-time developers with blockchain competency, built from our partnership with R3, an enterprise software company focused on building a proprietary blockchain-inspired platform, Corda. Our Company will initially serve asset managers and fund administrators at banks, hedge funds, private equity firms and other financial institutions to deal with the resource- and time-costly process of managing and distributing expenses to each fund, or split of funds, as appropriate. Building out and providing this spend management service for asset managers is phase one of our company. Going forward, aXpire will expand its spend management technologies across industries outside of asset management, e.g. natural resources, travel & leisure, healthcare, food & beverage, transportation etc., removing human-manual processes in the expense management lifecycle through a highly secure SaaS model. Outside of asset management, our technologies will allocate expenses across different internal departments, or “cost centers” (e.g. finance, legal, accounting etc.) in a similar fashion to expense apportionment across different funds within asset managers. This industry-agnostic approach is phase two of our company, mainly focused on mid- and back-office expense management improvements. We have advisor experts in all of the aforementioned industries to enhance our go to market strategy.

Our suite of aXpire applications create seamless, digital connections across all key functional departments and stakeholders, including:

As a SaaS solution servicing regulated customers, we have strong barriers to entry through data gathering and security network effects. Our data gathering efforts allow machine learning at each client to provide increasingly sophisticated solutions, eventually removing the bulk of human input. In regards to security, as an ISO 9001:2015 & ISO 27001:2013 certified Company, security and quality is at the core of all of our solutions.

OUR PARTNERS

aXpire is actively involved in a number of core partnerships, including R3 and Microsoft. R3 is an enterprise software company focused on building a proprietary blockchain-inspired platform, Corda. aXpire has been an official partner of R3 since November 2017, and is listed alongside Accenture, Bain & Company, Cognizant, KPMG, Hewlett Packard, Intel and Microsoft, among others. Our in-house development team works with R3 to implement blockchain software into our existing applications, and has been actively trained in Corda. We also work closely with Microsoft as a partner on their PowerBI tool, allowing us access to their latest software, and also allowing us to engage in a fruitful two-way conversation. Other partnerships include the International RegTech Association, the Enterprise Ethereum Alliance (EEA), Bounty0x and Devery.

KEY BENEFITS OF AXPIRE

- Removal of manual processes through machine learning
- Replace paper, PDF and spreadsheets (PPS) with digital workflows
- Ensure minimal touch points in the spend management process
- Increase operating profit by 15-25%^[5]
- Enable electronic interdepartmental communications
- Track and manage workloads, timelines, expense aging
- Connect disparate “legacy” technologies as a “plug and play” solution
- Provide digital audit trails for regulatory compliance
- Reduce or remove data quality errors
- Enhance compliance reporting capabilities
- Provide robust data analytics dashboards
- Delivered via a highly secure SaaS model

The solution is focused on utilizing technology - including artificial intelligence - as a platform to reduce human error, increase profit and enhance internal procedures via a “connected application”. Artificial intelligence serves as a core part of our offering to empower users to make the right decision when it comes to approving or denying expenses. For example, the longer our relationship with a customer, the larger the SQL database of previously approved or denied invoices we will have collected. Each invoice receives an aXpire Rating Score (ARS) from 0 to 100, with 100 indicating a green light for immediate submission, 0 indicating revisions are required and anything in between requiring user judgement. For each new expense, we can offer the internal finance departments clear guidance as to whether new expenses fit criteria of previously approved or denied expense, saving time and reducing error. We aim to not entirely remove the human aspect of spend management, but to enhance it. The longer the client relationship, the greater the average ARS.

As aXpire evolves, further technological enhancements will be implemented, such as blockchain technology, as well as value-add services that include legal, actuarial, accounting and general administration. aXpire is deployed as a highly secure SaaS model, meaning we offer extremely competitive pricing when compared to more traditional fund administration service providers, who charge on a percentage of Assets Under Management (AUM) basis rather than Per Member Per Month (PMPM). For example, our first client - a \$24Bn hedge fund, pays the equivalent of 1-2 basis points of AUM, if they were also ~5% of their current size. Currently, fund administrators charge between 10 - 15 basis points.

MARKET OPPORTUNITY

aXpire currently operates in a number of markets. The enterprise software market stands at \$351Bn, and we play into the FinTech, RegTech and Enterprise Resource Planning (ERP) technology areas of that market. The artificial intelligence market in FinTech is expected to grow from \$1.3Bn in 2017 to \$7.3Bn by 2022, a CAGR of ~40.4%^[2]. The RegTech market is expected to grow from \$10.6Bn in 2017 to \$76.3Bn by 2022, a CAGR of ~48.0%^[3]. By far the most mature market we operate in, the global ERP market was estimated to be worth \$31.4Bn in 2016. This relatively mature market is expected to record an estimated CAGR of ~7.0% during the forecast period, to reach \$47.0Bn by the end of 2022^[4].

THE PROBLEM

The problem is simple: businesses waste money; they are not as profitable as they should be. Currently, we estimate asset managers overspend in the mid- and back-office by 15-25%^[5]. This does not include the additional cost of delayed processes and erroneous filings. In support of these broader findings, recent research has found that RegTech spending, as a percentage of regulatory spending, will increase dramatically, from 4.8% in 2017 to 34.4% by 2022. With multinational financial institutions such as Citi having as many as 30,000 compliance staff, just 3 bank compliance departments could fill London's Wembley Stadium. This level of staffing means that a 50% reduction could save a single large bank \$1.2 billion per annum, based on average wages^[3]. A payment ecosystem to manage expenses through an efficient, secure and automated process does not yet exist. Data is too often siloed between non-compatible softwares and companies are left to store information on paper, PDFs and spreadsheets (PPS). There are often a number of business needs that are left unaddressed as a whole in the current software marketplace:

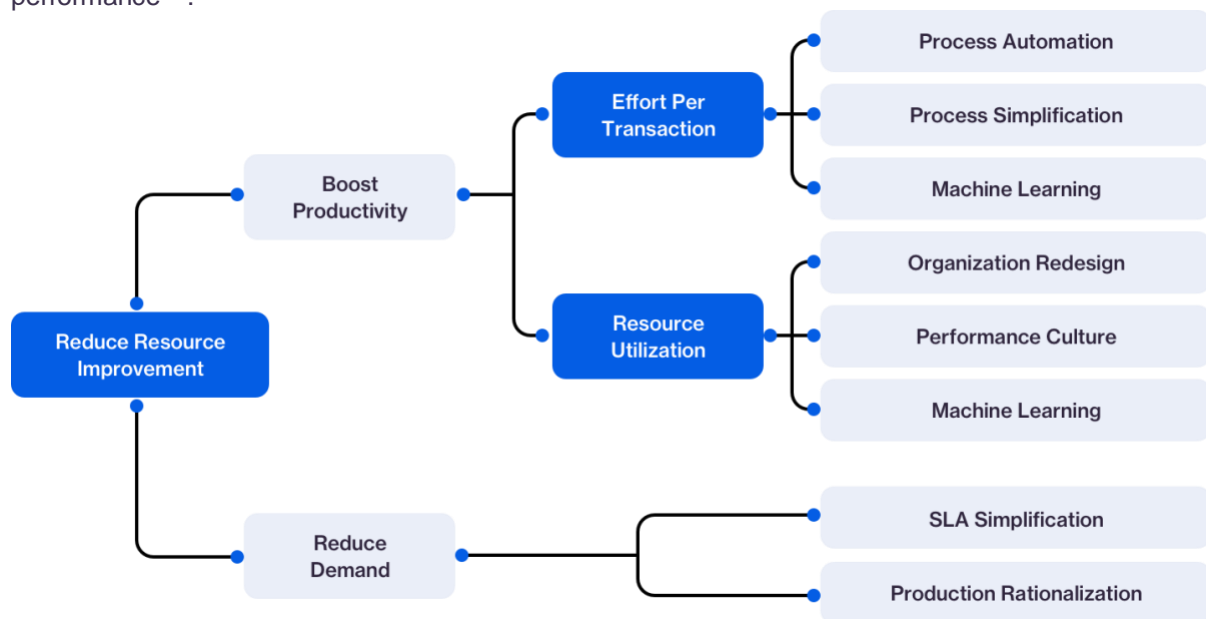

- Maximizing profitability
- Financial compliance
- AP automation
- Mobile productivity
- Interdepartmental communication
- Spend visibility
- Meaningful data analytics

At aXpire, we intend to solve these problems through our Resolvr solution, which combines the best features of products that exist in the market today, and pulls on numerous efficiency levers. We help both businesses and consumers procure services and manage this spend as efficiently as possible.

THE SOLUTION

Resolvr – “Connecting Digital Islands” within your organization.

We have both a P2P and a B2B solution. Resolvr is aXpire's B2B spend management software. Resolvr is a high performance application, under the aXpire brand, and is being integrated with other core applications used by fund administrators, accounting and finance teams, e.g. Coupa, QuickBooks and HazelTree. We pull on a number of “efficiency levers” to improve on status quo performance^[5]:

Our web-based application was developed in an asp.net MVC framework, which offers architectural benefits and enables easily maintainable code. Our custom entity framework is an Object Relational Mapping tool that enables the automatic generation of a data access layer from our software's SQL database. Web API's are used as middleware technology, building HTTP based services that can be accessed via various applications on different platforms such as web, windows, mobile etc. In the first release of "Resolvr," we are facilitating the seamless, auditable workflows of digital expenses management, review, apportionment and allocation according to the fund or funds to which every dollar should be associated. There are accounts reconciliation, oversight and control mechanisms built in to ensure all stakeholders can share information, make adjustments, send annotations, attachments and other communications before the final product is handed over to a client's finance department. The API feeds to and from Resolvr mean no more PPS documents are required to connect each requisite department in order to enable them to perform their fiduciary duties. aXpire is able to work with any API, including, but not limited to, HazelTree, Oracle, QuickBooks and SAP. Time and resource-consuming manual tasks have been removed. Automatic compliance and reporting tools have been enabled. This fully digitized environment not only saves time, money and effort, but also cuts down on human error in the data, thus improving levels of auditable compliance, a key value proposition in light of the increased RegTech demand. All transactions contain an appropriate audit trail with key performance indicators tracked throughout the process; see below for examples:

We are building out new enhancements and modules including a "Compliance Dashboard", for the Chief Compliance Officer (CCO) and General Counsel of our clients, and adding further data visualizations to our analytics and reporting. Resolvr is also undergoing slight modifications to achieve an "industry agnostic" solution.

MatchBX – "Procuring Services" with the blockchain.

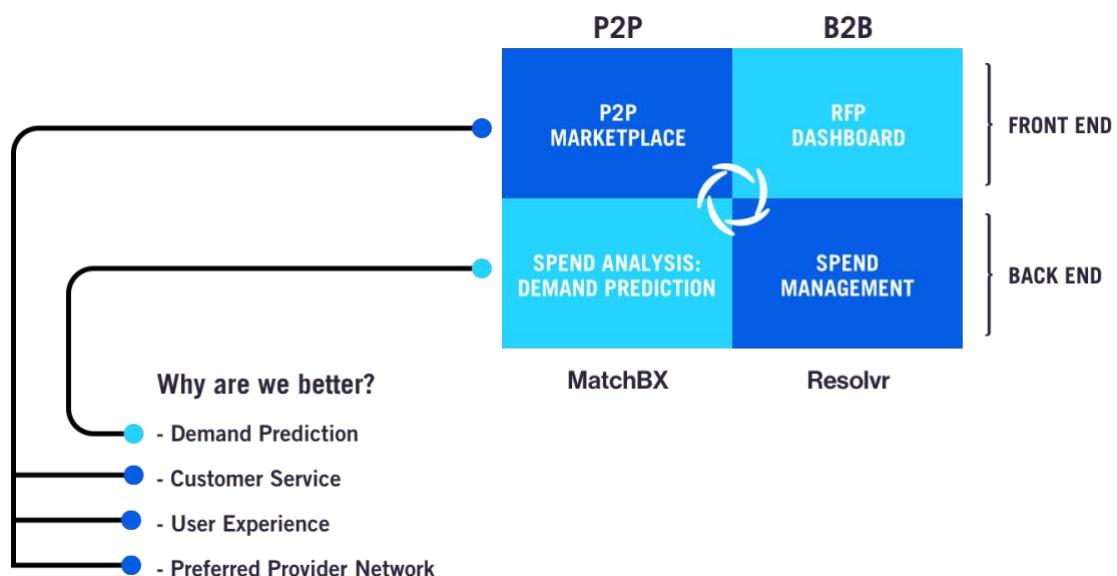

Our P2P marketplace, Matchbox Blockchain Exchange, MatchBX (pronounced "Matchbox"), is a relatively new concept in the life cycle of aXpire, incorporated in light of the strong demand for crypto-based services in the market. We saw a demand for handling RFPs in the B2B context, and have translated that into a higher volume consumer environment. We are allowing individuals to participate in the platform as part of the new economy, either as a freelancer or as a task creator. We will power this product, as with all of our products, with AXP - driving token value in (yet another) use case.

We've seen growing synergies between B2B and P2P with our RFP platform, where the need for simple logo designs and development, for example, has scaled out of proportion for businesses. Our clients have previously had to go through multiple hoops with larger service providers, spending additional capital, for a solution that could have been solved in an efficient and simple manner, by a single designer or developer. Now, by combining our offerings, we will be able to offer our clients solutions fitting needs both large and small, by leveraging aXpire's ability to search for work on MatchBX or posting on Resolvr's RFP portal for larger solutions. MatchBX will also have the added benefit of seeing incremental involvement from the community built through our token sale.

We will work to expand our Preferred Provider Network, right now featuring Devery among others, to offer customers access to trusted and preferred sources of high value services. This network will provide users access to a trusted product, sometimes at bonus or discount prices, through partnerships these companies have with aXpire.

In the background of this product we will run a different kind of spend analysis, demand prediction, which will drive additional preferred partners to our site. Think of it like surge demand on Uber, except without the associated price increases - we simply point partners towards early indicators of demand and the need for supply to fill any gaps. We will implement a small fee on all transactions via an AXP burn.

An overview of our solutions follows, keep in mind, only the back end of Resolvr is currently live and in use:

SOLUTION USE CASE

As part of aXpire's current offering, the Company provides expense management solutions to asset managers through the Resolvr software solution. As we expand into different verticals for expense

and spend management, we are tailoring our mid- and back-office solutions to fit companies across all industries.

As a use case, let's describe the setup in a typical hedge fund or investment company (the 'firm'). The firm retains a panel of legal and non-legal vendors with whom it does business. Services are also supplied on an occasional basis by off-panel firms. Litigation services, regulatory and compliance advice, among other services, are supplied by the former. Secretarial, research and other services are provided by the latter. All vendors need to invoice the firm, and these are generally submitted by email with .pdf attachments or by paper copy. Though there may be a Services Level Agreement (SLA) in place that specifies the firm's required recipient of invoices, they may be sent to a variety of people. The invoices need to be assessed by reviewers or in-house attorneys to a) ensure an invoice correctly includes services provided and at the appropriate, agreed rate, and b) the invoice expenses need to be allocated correctly to appropriate firm funds and/or cost centers. Currently, this work is performed by printing invoices, marking line items for fund/cost center allocation by hand, negotiating by phone or email with vendors, sometimes having invoices updated and re-submitted, and then handing marked-up paper copies to the accounting team, who enter data into spreadsheets in order to allocate expenses to funds/cost centers. All of this manual/administrative effort, with minimal audit trail and knowledge of the progress/location of invoices or immediate reports on the allocation of expenses. With AIFMD, FATCA and SEC requirements, this process quickly becomes costly without efficient technology in place. Resolvr removes all the above administrative effort, uncertainty and lack of auditable visibility.

Panel legal and non-legal vendors submit e-bills electronically into Resolvr. All they need is access to the internet, and a one-time, simple registration. Vendors who are unable to create e-bills can use the aXpire Billing app that is embedded into Resolvr. aXpire Billing enables any vendor to type in their invoices via an industry standard form, such as LEDES XML 2.1, and submit them. As we progress with Resolvr, we will add an RFP portal for third party vendors to submit proposals / bids on services, which will output electronic invoices in the appropriate format. Until this functionality is built, the firm's administrative and/or accounting staff can use aXpire Billing to input and submit invoices that have been sent to them by methods other than Resolvr, ensuring that all expenses are captured in one place, made visible, processed efficiently and are included in appropriate reports. Everything is live, everything is auditable.

The firm can configure Resolvr to automatically allocate invoices to specific reviewers, based on, for example, vendor name. Alternatively, administrative staff can allocate selections of, or individual invoices, to reviewers.

Reviewers use their Resolvr Dashboard to view lists of invoices, filtering and sorting as they wish. They can see the current status/location, ageing, detailed audit trail, configurable spend and expense allocation data visualizations/reports. And they review invoices online, using the powerful filter, sort and actions features within Resolvr. The aXpire Rating Score (ARS) is provided at the point, reducing review time and error, increasing transactions per employee and effectively utilizing the aXpire Data Vault (ADV). When the review has been completed, adjustments made as necessary, comments added and fund/cost center allocations calculated automatically, invoices are forwarded electronically to the accounting team for checking and any required adjustment of allocations. Invoices are then sent for payment, with payment data being formatted automatically; supporting documentation is included, and information is transmitted immediately to the AP department.

All of the firm's Resolvr accredited staff can see the location, status and content of invoices, with appropriate update/review access limited as per the firm's requirements. Following the payment of a small e-bidding platform access fee in AXP, vendors can bid on customer projects and track invoices post contract assignment. Importantly, vendors can see the status of their invoices, leading to fewer queries, which frees the operational team..

Resolvr data and reports provide immediate knowledge and visibility to appropriate firm staff and can be used to support regulatory/compliance/audit requirements. Firms are increasingly and necessarily wanting to streamline and make more cost-effective their mid- to back-office operations, enabling their staff to concentrate on business-critical work and remove unnecessary, time-consuming resource requirements on report production, audit and regulatory requirements.

HOW IT WORKS

Broadly speaking, Resolv'r is a dashboard-based, four step process, as outlined below:

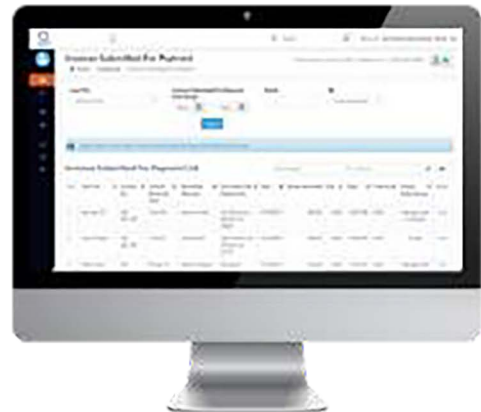

1

E-billing submission
& validation

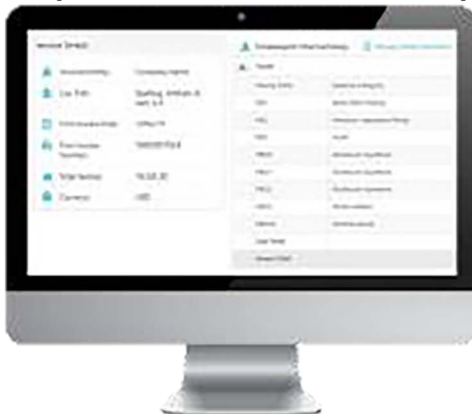

2

Bills reviewed, adjusted, categorized &
allocated to paying entities

3

Accounts services validation & adjustment.
Payment data collated automatically.

4

Payment Systems

Overarching all of this spend management workflow is a sophisticated data validation engine that performs spend analysis in real time through ARS. Users have access to the basis of this information, which empowers expense management decisions:

Live demos are available on request by emailing info@axpire.com

BUSINESS MODEL

aXpire's business model is based on a Per Member Per Month (PMPM) fee structure, with a one-time initial implementation fee. Given a cloud-based model, we are able to achieve an attractive Customer Lifetime Value to Customer Acquisition Cost of ~5.0x. As we build out a full suite of applications to represent an end-to-end administration solution, we will consider moving away from a PMPM pricing methodology and towards a % of AUM approach (as traditional administrators do now). We will be cash flow positive in 3 years. To give an idea of our competitive position, we are able to offer a \$24Bn hedge fund the same rate that a \$1-2Bn hedge fund would pay (assuming it also received an 80%+ discount to the prevailing market prices).

CAC

\$480K
LTV

RESOLVR BENEFITS

Benefits for Businesses

aXpire's key software solution is called Resolvr. This solution offers access to extensive spend data in real time, with the ability to allocate costs between different internal departments. Our platform's real-time feed - with machine learning and interdepartmental communication built in - leads to superior decision-making and significant cost savings. Our platform is the next logical step in the spend and payments management revolution; say "goodbye" to paper, PDF and spreadsheets, and "hello" to Resolvr.

Machine learning, a sub-set of artificial intelligence, drives our key value proposition. Every invoice and expense that flows through our core product, Resolvr, serves to build a database of similar data points, and actions that were taken within those data, to optimize spend control. This model offers businesses significant and sustainable savings that can translate into improved profitability.

Benefits for Vendors

We see strong vendor adoption of Resolvr due to ease of enablement, flexibility and lack of vendor fees. Both clients and vendors are able to access extensive, live data, which can result in significant time and cost savings. Resolvr eliminates human-manual processes and improves efficiencies through electronic invoicing and streamlined procurement through e-bidding. Vendors are automatically notified of invoice status, and are provided ample documentation to ease their regulatory compliance. The application dashboards create a user friendly environment.

Benefits for Employees

Our simple and intuitive user interface ensures rapid uptake by our clients' employees, with artificial intelligence aiding decision making and minimizing manual processes. On the procurement side, our software affords employees a rapid acquisition of goods and services to fulfill their job responsibilities. Moreover, all Resolvr services are available in a mobile interface, maximizing simplicity and convenience.

AXP TOKEN

The AXP token is a decentralized application (dapp) token developed on top of Ethereum blockchain, in line with the ERC223 standards, which is an enhanced version of its predecessor ERC20 standards. For the avoidance of doubt, the AXP token is ERC20/ERC223, i.e. an ERC20 token with ERC223 extensions. The token is fully backwards compatible with all ERC20-compatible contracts and wallets. The initial distribution of the token was completed through a TGE (Token Generation Event).

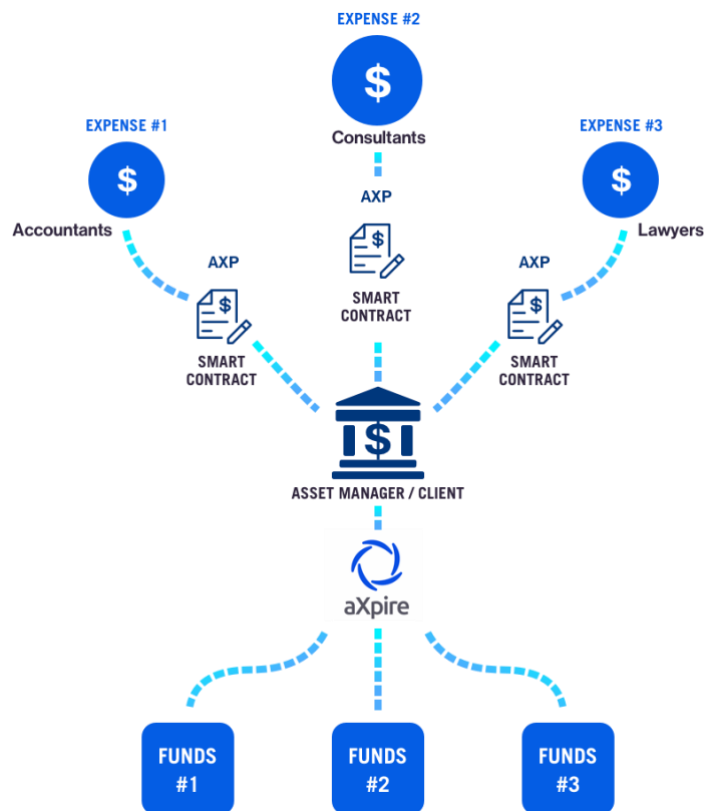

Once we build out our industry agnostic software back end, we will require vendors to use AXP for "e-procurement" and/or "e-bidding" for expense contracts through our RFP portal. Clients will be able to submit jobs to our platform, with invoices payable in AXP. If vendors plan to transact on the live network and submit invoices, they'll need AXP to cover the base fees for those transactions. By design, transaction fees on aXpire are very low cost. For more detail, see the "AXP SMART TOKEN CONCEPT" section of this white paper.

AXP will also be used in our P2P application, MatchBX, as a means to budget and pay for services. There will be a small fee associated with each transaction, which will take the form of AXP. This transactional AXP will follow a "burn" function, and will be removed from the total supply, increasing the utility value of each token.

The total supply of the tokens is limited to 350,000,000 units and will decrease over time with the AXP burn function. The TGE will distribute up to 75% of the total supply of tokens, 262,500,000 tokens. This total amount will be split between a pre-sale / sale / referral program / bounty (up to 30% / 40% / 4% / 1% of available tokens, respectively). Any tokens not sold during the TGE will be held in our corporate wallet as reserve tokens for development expenses and working capital in future raises. The remaining 25% of tokens will be split between reserve tokens (10%), advisor & developer tokens (10%) and bug bounty program (5%).

Management of the TGE is performed through smart contracts, which deal with token transfer, creation, minting etc. Code written for the TGE will be open source, available for smart contract structure and concept auditing. There will be public APIs available for developers as well as exchanges to conduct operations, like transfer or purchase of AXP tokens. In the public presale, participants can obtain the token at a 30% discount rate, or \$0.07 USD. The AXP token would be exchanged with the valuation 1 AXP = 0.10 USD or equivalent ether or bitcoin (additional forms of payment are being considered). The TGE will end as soon as the 40% token generation hard cap, \$20m, is attained.

AXP TOKEN

TOKEN DISTRIBUTION

- As mentioned above the TGE and presale will be responsible for the distribution of 75% of the token: 262,500,000 tokens. This distribution includes the pre-sale (up to 30% of available tokens), full sale (40% of available tokens), referral program (up to 4% of available tokens) and bounty program (1% of available tokens). Any tokens not sold in the pre-sale will be transferred to our reserve tokens.

TGE - 262,500,000 AXP (up to 75%)

- We are setting aside 10% of the total AXP tokens for the development team & advisors. These tokens are locked by contract for 12 months.

Advisors and Developers - 35,000,000 AXP (10%)

- We are reserving 10% of our supply to be used by the company for expenses and development.

Reserve - 35,000,000 AXP (10%)

- Finally, we will offer a bug bounty program to keep security up to the highest standards possible. A total of 5% of the token supply will be set aside for this purpose.

Bug Bounty – 17,500,000 AXP (5%)

All the distribution after the TGE will only be performed in good faith to not adversely affect participants in the TGE.

TOKEN CONSIDERATIONS

Strongly consider the following prior to purchasing AXP tokens; aXpire is an enterprise software SaaS product that's targeting different markets within RegTech, FinTech and ERP Technologies. We are not yet a consumer solution, so it's unlikely that consumers will see a day-to-day use of our platform unless they are in the finance, legal and/or accounting departments of a corporation or asset manager. We are considering providing back end support to B2C solutions as it relates to payments and data analytics. We hope to minimize speculative value and maximize utility value as more data is fed into the Resolvrr platform. We are setting a soft cap of \$3m and a hard cap of \$20m; this is a real product with existing customers. Token sale hard cap, dates and milestones may change in accordance with unforeseen aXpire expenditures and/or client/talent opportunities.

Users should consider the utility of the AXP token prior to purchasing; our team will work to expand the utility of AXP as our platform continues to grow.

LEGAL STRUCTURE

aXpire will conduct the TGE through an offshore partner company, located in Singapore, which will be responsible for issuing, distributing, and managing AXP tokens. The purpose of using this third party offshore company to conduct the TGE is to ensure compliance and transparency. The Singapore company will be a token holding and issuance entity, with a pass through to our operating company, a Delaware, United States C-corporation.

It will also ensure that the funds generated during the Token Generation Event will not be used as a direct business asset, meaning the company won't be treating this as income like some other TGE's have done in the past. The money raised will be treated as separate and managed accordingly to ensure transparency for all participants. Essentially, this means that corporate funds are not mixed with those raised during the Token Generation Event.

Using an offshore partner also gives our European and North American clients and providers confidence that they are not engaging with a company that has participated in a Token Generation Event, which is currently a concern for those looking to work with companies that may have raised funds through such a method.

From a regulatory perspective, this means that the entity responsible for issuing, distributing, and managing the tokens is based within a Token Generation Event "friendly jurisdiction." In doing this, we ensure that aXpire will not fall short of any regulatory laws concerning Token Generation Events nor participate in countries which may have "grey" regulations concerning such activities.

MILESTONES

WHY DECENTRALIZE?

aXpire solves the need to maximize profitability through artificial-intelligence-driven, blockchain and cloud-based spend management. We can offer meaningfully differentiated security through the provision of our software in a distributed, secure and egalitarian manner - there is a decentralization edge. We reduce the incentive for cyber security threats through the use of a unique, AXP token. We also leave an immutable trail of transactions that provides value throughout the auditing, compliance and reporting process for any client that is required to understand company spend and profitability data. Regulated hedge funds, for example, need to report fund expenses to the SEC. Any user of our software will also be able to view, in real time, spend data across the company, providing live data for intelligent profit maximization. Decentralization provides us access to all of these advantages, and also allows a “clean” method of fundraising, kickstarting early growth.

Our TGE will provide funding for the further development of Resolvr, future platforms, educational resources for our clients interested in blockchain/AXP/Resolvr and an incentivization pool for encouraging businesses to adopt aXpire products and AXP.

GENERAL OVERVIEW OF TOKEN GENERATION EVENT

aXpire launched its TGE in early January via a pre-sale to the public through www.axpire.io. We completed our full sale in 89 hours, and sold 75% of all available tokens in the TGE, with the remaining tokens used as set out in the “TOKEN DISTRIBUTION” section. Our circulating supply sits at 265m as of February 28, 2018.

CONCLUSION

aXpire comprises secure enterprise software spend and payments management technology. We offer a fast, safe and auditable way to manage spend on external vendors. We allow internal departments to communicate seamlessly and we plug and play into a variety of existing softwares to avoid data silos. We will exercise our expertise in data analytics to build out an spend management artificial intelligence platform. Our AXP token represents a vehicle to enable spend management in a distributed ledger environment. Funds raised from our token sale will be used to develop the utility of the platform and a global spend management solution.

For more information, reach out to info@axpire.com

GLOSSARY

Accounts Payable Automation (AP Automation) - helps organizations cut their operational cost on processing invoice manually

Alternative Investment Fund Managers' Directive (AIFMD) - one of a package of measures drawn up by the European Commission after the 2008/9 financial crisis to regulate financial services

Application Program Interface (API) - set of routines, protocols, and tools for building software applications

Assets Under Management (AUM) - total amount of funds controlled by an asset manager

AXP - aXpire's token symbol

aXpire - cloud-based, and AI-enabled blockchain payment-processing company

aXpire Billing - aXpire's invoice creation, conversion and submission software program

aXpire Data Vault (ADV) - aXpire's collection of anonymized spend data

aXpire Rating Score (ARS) - rating of 0 through 100, indicating invoice compliance (0 = non-compliant against the SLA - revision required prior to submission, 100 = fully compliant with SLA - immediate submission appropriate)

Artificial Intelligence (AI) - machine behavior that mimics "cognitive" functions that humans associate with other human minds, such as "learning" and "problem solving" - in aXpire's case, machine learning, a subset of AI, occurs when our software suggests invoice outcomes based on data in the ADV

Business-to-Business (B2B) - a situation where one business makes a commercial transaction with another

Business-to-Consumer (B2C) - business or transactions conducted directly between a company and consumers who are the end-users of its products or services

C-Corporation - any corporation that is taxed separately from its owners

Customer Acquisition Cost (CAC) - cost associated with convincing a consumer to buy your product or service, including research, marketing, and advertising costs

Customer Lifetime Value (CLV) - prediction of the net profit attributed to the entire future relationship with a customer

Enterprise Resource Planning (ERP) - integrated management of core business processes, often in real-time and mediated by software and technology

ERC20 - popular cryptocurrency and blockchain system, is based on the use of tokens which can be bought, sold, or traded

ERC223 - an enhanced version of ERC20 that solves a number

Foreign Account Tax Compliance Act (FATCA) - 2010 United States federal law to enforce the requirement for United States persons including those living outside the U.S. to file yearly reports on their non-U.S. financial accounts to the Financial Crimes Enforcement Network (FinCEN)

Full Time Employees (FTE) - employee employed on average at least 30 hours of service per week, or 130 hours of service per month

Hard Cap - a maximum amount of funds raised that may not be exceeded, \$20m for aXpire

ISO - international security standard that specifies requirements for a quality management system (QMS)

LEDES - machine-readable text file that displays invoice data in a specific order and format. This allows a company to accept all legal bills in a standard way and makes processing and payment much easier

LSG - aXpire's parent company, and InsurTech legal bill review, ebilling, BPO and data analytics company

Microsoft - enterprise software company, aXpire partner

Model View Controller (MVC) - one of three ASP.NET programming models

DISCLAIMER

PLEASE READ THIS DISCLAIMER SECTION CAREFULLY. IF YOU ARE IN ANY DOUBT AS TO THE ACTION YOU SHOULD TAKE, YOU SHOULD CONSULT YOUR LEGAL, FINANCIAL, TAX, OR OTHER PROFESSIONAL ADVISOR(S).

The information set forth below may not be exhaustive and does not imply any elements of a contractual relationship. While we make every effort to ensure that any material in this white paper is accurate and up to date, such material in no way constitutes the provision of professional advice. aXpire does not guarantee, and accepts no legal liability whatsoever arising from or connected to, the accuracy, reliability, currency, or completeness of any material contained in this white paper. Potential aXpire token holders should seek appropriate independent professional advice prior to relying on, or entering into any commitment or transaction based on, material published in this white paper, which material is purely published for reference purposes alone.

aXpire tokens is not intended to constitute financial securities instruments in any jurisdiction. This white paper does not constitute a prospectus or offer document of any sort and is not intended to constitute an offer of securities or a solicitation for investment in securities in any jurisdiction. aXpire does not provide any opinion on any advice to purchase, sell, or otherwise transact with aXpire tokens and the fact of presentation of this white paper shall not form the basis of, or be relied upon in connection with, any contract or investment decision. No person is bound to enter into any contract or binding legal commitment in relation to the sale and purchase of aXpire tokens, and no cryptocurrency or other form of payment is to be accepted on the basis of this white paper.

This aXpire white paper is for information purposes only. We do not guarantee the accuracy of or the conclusions reached in this white paper, and this white paper is provided "as is". This white paper does not make and expressly disclaims all representations and warranties, express, implied, statutory or otherwise, whatsoever, including, but not limited to: (i) warranties of merchantability, fitness for a particular purpose, suitability, usage, title or non-infringement; (ii) that the contents of this white paper are free from error; and (iii) that such contents will not infringe third-party rights. and its affiliates shall have no liability for damages of any kind arising out of the use, reference to, or reliance on this white paper or any of the content contained herein, even if advised of the possibility of such damages. In no event will team aXpire or its affiliates be liable to any person or entity for any damages, losses, liabilities, costs or expenses of any kind, whether direct or indirect, consequential, compensatory, incidental, actual, exemplary, punitive or special for the use of, reference to, or reliance on this white paper or any of the content contained herein, including, without limitation, any loss of business, revenues, profits, data, use, goodwill or other intangible losses. aXpire makes no representations or warranties (whether express or implied), and disclaims all liability arising from any information stated in the white paper. In particular, the "Roadmap" as set out in the text of the white paper is subject to change, which means that aXpire is not bound by any representations to the future performance and the returns of aXpire. The actual results and the performance of aXpire may differ materially from those set out in the aXpire white paper.

Please note that contents of this aXpire white paper may be altered or updated at any time in future by the project's management team. The white paper has been prepared solely in respect of Initial Token Offering of aXpire tokens. No shares or other securities of the Company are being offered in any jurisdiction pursuant to the white paper. The white paper does not constitute an offer or invitation to any person to subscribe for or purchase shares, rights or any other securities in the Company. The shares of the Company are not being presently offered to be, registered under Securities Act of any country, or under any securities laws of any state. the tokens referred to in this white paper have not been registered, approved, or disapproved by the us securities and exchange commission, any state securities commission in the United States or any other regulatory authority nor any of the foregoing authorities examined or approved the characteristics or the economic realities of this token sale or the accuracy or the adequacy of the information contained in this white paper under, the U.S. Securities act of 1933 as amended, or under the securities laws of any state of the united states of America or any other jurisdiction. Purchasers of the tokens referred to in this white paper should be aware that they bear any risks involved in acquisition of aXpire tokens, if any, for an indefinite period of time. Some of the statements in the white paper include forward-looking statements which reflect team aXpire's current views with respect to product development, execution roadmap, financial performance, business strategy and future plans, both with respect to the company and the sectors and industries in which the company operates. Statements which include the words "expects", "intends", "plans", "believes", "projects", "anticipates", "will", "targets", "aims", "may", "would", "could", "continue" and similar statements are of a future or forward-looking nature. all forward-looking statements address matters that involve risks and uncertainties. Accordingly, there are or will be important factors that could cause the group's actual results to differ materially from those indicated in these statements. these factors include but are not limited to those described in the part of the white paper entitled " risk factors ", which should be read in conjunction with the other cautionary statements that are included in the white paper. Any forward-looking statements in this white paper reflect the Company's current views with respect to future events and are subject to these and other risks, uncertainties and assumptions relating to the Company's operations, results of operations and growth strategy. These forward-looking statements are made only as of the date of the white paper. Subject to industry acceptable disclosure and transparency rules and common practices, the company undertakes no obligation publicly to update or review any forward-looking statement, whether as a result of new information, future developments or otherwise. All subsequent written and oral forward-looking statements attributable to aXpire or individuals acting on behalf of aXpire are expressly qualified in their entirety by this paragraph. No statement in the white paper is intended as a profit forecast and no statement in the white paper

should be interpreted to mean that the earnings of aXpire for the current or future years would be as may be implied in this white paper. By agreeing to acquire aXpire tokens I hereby acknowledge that I have read and understand the notices and disclaimers set out above and contained in this white paper. No regulatory authority has examined or approved any of the information set out in this white paper. Thus, no action has been or will be taken under the laws, regulatory requirements or rules of any jurisdiction. The publication, distribution or dissemination of this white paper does not imply that the applicable laws, regulatory requirements or rules have been complied with. Please refer to our website for terms & conditions of participating in the aXpire initial Token offering.
