We do not need another fork. The increasing demand for cryptocurrency though exciting, has proved otherwise due to slower transactional speeds when using Bitcoin. Nonetheless, life still goes on in the first world countries where Bitcoin, and Altcoins are easily accessible by a click or tap on your phone. The rest of the world wants to catch up but access to cryptocurrency is limited due to several reasons including local currency conversion, access to the the smart world (Internet, Smart phones, etc.) and a free and fair ecosystem to trade/ exchange cryptocurrency.

The team at Bitcoin Silver includes multiple individuals who see the potential in decentralized currency in parts of the world where currency is rationed to the advantage of the top few. We see how cryptocurrency could be used to transform money transfers, boost local economies, and connect the world to the rest of the world in minutes. An incredible platform with low transactional fees, and fast speed such as Ethereum gives us the opportunity to make this happen.

The truth about extending cryptocurrency access and use to the rest of the world is that it does not end with developing a coin, but it goes much more further than that. It includes providing easy access to internet, smart phones/devices, conversion/exchange capability, and a trading marketplace. We currently provide cryptocurrency to traders in second to third world countries. Having local representatives and local governments on board to facilitate this change has proved incredibly beneficial as we take on this revolution. Providing access to us means education, mobile phones, use value, marketplace, smart wallets, and most of all realtime cryptocurrency conversion.

The Problem

The second and third world cryptocurrency “problem” is simple: inaccessibility. The economic demand for cryptocurrency is booming, cryptocurrency trading is expanding, but to have clean and clear access to this incredible decentralized currency seems impossible. Even in a first world economy like the United States, until the formation of Coinbase, access to Bitcoin and altcoins took a lot of work. For such a revolutionary industry, surpassing a hundred billion in market volume, imagine how much further we are yet to go when we cover over 50% of global currency. Coinbase created a path for the Americas to easily tap into the world of cryptocurrency at their fingertips, we intend to do the same and more. Access to cryptocurrency in the rest of the world is currently only channeled through third parties at highly inflated rates other than official trading value. A decentralized ecosystem looking to make change in fiat currency will have to move uniformly across the globe.

Market Growth

The percentage of online trading and transactions have increased by over 80% globally and this includes countries that you may not even have heard of. Demand for cryptocurrency has doubled according to statistics. With banks, and other financial institutions jumping in to launch their own cryptocurrency, it is only a matter of years for world adoption in banking, and trade.

Here's how we know

Other than our 300 plus members spread all over the globe in cryptocurrency markets directly sourcing market information for the Bitcoin Silver project, news and media outlets have also observed the rise in demand and use for crypto around the world.

Why Bitcoin Silver?

The use and accessibility of cryptocurrency in first-world countries are ever growing and fully functional but what about the rest of the world? Countries that do not have Internet/WiFi in every region, or nearby internet café's on every corner?

Bitcoin Silver presents a solution to this issue:

An affordable cryptocurrency that runs on a fast blockchain network, with smart contract and smart wallet technology. Our end-goal is to ensure that every individual literate or illiterate, in the world owns and has easy access to cryptocurrency, Bitcoin Silver. Our mission doesn't end with developing an incredible product. It continues with a robust roadmap to drive trade activities using Bitcoin Silver. Providing accessibility means providing the platform and technology. Our team is currently working with several organizations around the world in the financial, mobile technology, and money transfer industries to propel value in decentralized currency.

To the team at Bitcoin Silver, providing a revolutionary product means providing the necessary tools to end users in other parts of the world for purchase and trade of cryptocurrency at their finger tips, and in their local currency. We're just getting started. Thank you for your help in creating a smart world.
